ToSL;DR

A tool that summarizes Terms of Service & highlights risky clauses

Created by:
Aarush Malik & Siddhi Kabadi
CSEN 160

Motivation/Why?

- People rarely read Terms of Service
- Important risks are hidden in clauses:
  - Data collection
  - Third-party sharing
  - Hidden fees
- Lack of transparency → users lose control of their data

Our Goal:

Make ToS accessible, understandable, and safe using:

- **summarization (NLP)**
- **automated red-flag detection**
- **a simple, aesthetic UI**

Tech Stack

Language	Java (JDK 17) — used to build the full desktop application (Swing GUI + services)
AI Model / NLP	• HuggingFace Inference API • Model: facebook/bart-large-cnn (used for ToS summarization)
Text Processing	• Readability4J — clean extraction of readable text from ToS webpages • Jsoup — HTML parsing + fetching content
Other Tools	• GitHub — collaboration + version control • PlantUML — diagrams (sequence, activity, class) • VS Code / IntelliJ — development environment

Project Features

Paste/Fetch ToS text

Users can paste any Terms of Service, or fetch it from a URL.

Generate Summaries

Uses the facebook/bart-large-cnn model to create clear, concise summaries of long ToS text

Flag Risky Clauses

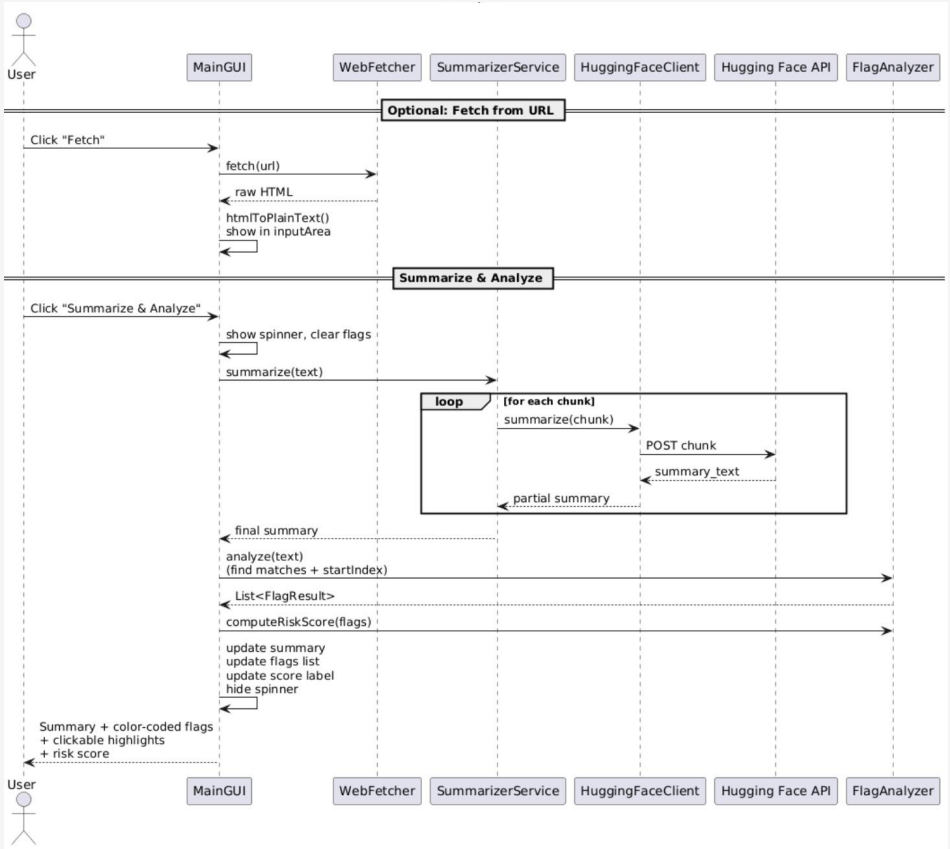

Automatically detects keywords related to data sharing, tracking, and other potential risks

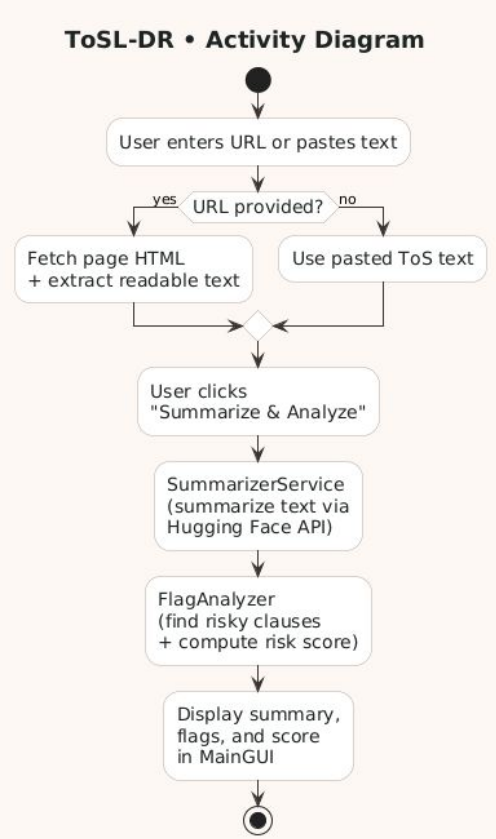

Clean & Simple UI

Minimal & intuitive interface designed for fast, and simple to understand summarization
